- commit 82ae591f55975b497f6697d8c8e1b6aa5383fa61

Update LIS documentation and error message

- Fixed a wrong unit entry for the "forcing\_variables.adoc" file
- Added "Openwater" option for surface model types (may have been forgotten in the past)
- Updated the start of an error message to '[ERR]'

Note: No issue was opened for this commit, since minor updates and easy to compare and merge.

- commit bc283550292b3bfd8ea136308c2e66e6b63d26f0

Corrected handling of binary integer constants.

ISO Fortran does not permit use of binary integer constants in PARAMETERS, but does permit them with DATA statements. Gfortran 10 and 11 treat use of binary integer constants with PARAMETERS as syntax errors, so the code has been adjusted.

- commit f52c4d2a183fa9616fdec9323b14b184b728a982

Minor editorial tweaks.

- commit 89734b33220159fbb0ccf8bc1f505455dc4544b2

Disabled MODIS real-time LAI reader, which is broken per David Mocko.

- commit 0e899dcb445d001b5a07334a41e85b1740476377

Fixed column indentation for call to penman\_ohd.

The relevant code is in column-sensitive Fortran 77, and extending the code past 72 columns causes truncation and a invalid argument list.

This bug was detected by GFORTTRAN 10+.

- commit ede6313c305f22f35438ee51a413e9cf0cb79f60

Numerous changes to LDT to satisfy gfortran 11.1.0.

- Updated gfrac and LAI/SAI C code to remove unnecessary arguments.
- Updated FLAKE code to move read\_FLake\_lakedepth into FLAKE\_parmsMod, allowing use of optional argument.
- Modified readSMOPSSmObs to move usage of binary integer constants to DATA statements (compliant with ISO Fortran).
- Minor editorial updates.
